TOP 10 WAYS BUSINESSES CAN HELP WITH COVID-19 VACCINATION

1. PROVIDE TRUSTED RESOURCES
   Direct employees to reliable resources on safety, efficacy, and value of the COVID-19 vaccine. Be ready to answer common questions and direct employees to reliable resources like Centers for Disease Control and Prevention and Vaccinate Your Family. Consider posting vaccine facts and myth busters around your employment space or holding educational seminars with guest speakers on vaccine safety and efficacy.

2. ENCOURAGE CONTINUED COVID-19 SAFETY
   While employees wait to get vaccinated, it is important to continue to follow CDC guidelines on mask wearing, handwashing, and social distancing. Check out CDC’s “How to Protect Yourself and Others” for the latest COVID-19 safety updates.

3. KNOW WHEN YOUR EMPLOYEES CAN GET VACCINATED
   CDC makes recommendations as to who should get vaccinated first, and each state makes their own vaccination plan. Be sure your employees know which phase they fall into in your state by posting information and directing employees to state health websites.

4. THINK OF WAYS TO GET YOUR EMPLOYEES VACCINATED
   If you can’t stand up a clinic, consider ways of directing workers to local vaccination sites. Provide up-to-date information on COVID-19 vaccine phasing and post local vaccination sites that are currently vaccinating or will be in the near future.

5. BUILD PARTNERSHIPS
   Building a robust network of partnerships is a great way to obtain further guidance. Consider partnering with faith leaders, community-based health organizations, community centers, nonprofits (ie. working with minority groups), sports organizations, and more.

6. ADDRESS EQUITY
   Consider working with non-traditional community partners, such as faith-based organizations. Be aware of language, monetary, transportation, and disability barriers. Partner and learn from other companies and their best practices. Identify trusted leaders to champion COVID-19 vaccination.

7. HOLD A VACCINATION CLINIC
   Standing up a vaccination clinic requires adequate space, storage capacity, and patient-centered details to be successful. Here are Best Practices from Baltimore County, MD and with logistical tips. Note you must be an enrolled provider or partner with an enrolled provider to vaccinate or hold a clinic.

8. LISTEN TO YOUR EMPLOYEES
   Consider the specific thoughts and needs of your employee base. Hold focus groups or send out a survey to determine barriers, challenges, and concerns. Listen to what would incentivize them to get vaccinated and make a plan.

9. CONSIDER ALTERNATIVE SUPPORT MEASURES
   Consider providing incentives to your employees including bonuses, PTO to get vaccinated, or sick leave as needed post vaccination. Ask yourself if you could provide any of the following resources:
   - Mobile vans for mobile vaccination clinics
   - Transportation resources
   - Scheduling, logistics, or IT support
   - Large spaces to hold vaccine clinics

10. DEMONSTRATE ORGANIZATIONAL COMMITMENT TO VACCINATION
    Sign a community pledge, nominate a vaccine champion, or receive your vaccine in public. Consider joining the White House’s Community Corps Initiative, an effort to galvanize trusted messengers to encourage vaccination, or CareFirst’s Building Together Community Pledge, where CareFirst makes a monetary donation to charity on behalf of employees who sign up for vaccination.
