

CYBER AND SUPPLY CHAIN

Cybersecurity

- Advance operational collaboration between U.S. national security agencies and critical infrastructure entities to proactively defend against foreign cyberattacks.
- Pass Internet of Things (IoT) legislation that reflects the industry-led core security baseline, protects device makers and buyers, reduces policy fragmentation globally, and bolsters collective defense.
- Enact the Cyber SAFETY Act to clarify that the 2002 SAFETY Act's liability protections apply to significant cyber incidents.
- Advance the rapid and secure deployment of 5G domestically while ensuring that national and international policy is aligned, promotes open and interoperable radio networks, is risk based, and fosters a vibrant technology market that rewards security and innovation.

Supply Chain

- Champion legislative solutions that modernize ports, solve e-commerce challenges, address security gaps, and improve trade facilitation.
- Engage with regulators to enact commonsense policies that enhance U.S. competitiveness and improve the flow and security of goods moving across our borders.

Promote and enact sound cybersecurity and global supply chain policies to facilitate safe and secure domestic and global commerce and trade, as well as the free movement of goods to enhance U.S. competitiveness.
