

THE FACTS ON NAFTA

Assessing Two Decades of Gains in Trade, Growth, and Jobs

U.S. CHAMBER OF COMMERCE

Executive Summary

With a two-decade record to examine, it's plain the North American Free Trade Agreement (NAFTA) has generated substantial new opportunities for U.S. workers, farmers, consumers, and businesses.

- Trade with Canada and Mexico supports nearly 14 million American jobs, and nearly 5 million of these jobs are supported by the increase in trade generated by NAFTA.
- The expansion of trade unleashed by NAFTA supports tens of thousands of jobs in each of the 50 states—and more than 100,000 jobs in each of 17 states.
- Since NAFTA entered into force in 1994, trade with Canada and Mexico has nearly quadrupled to \$1.3 trillion, and the two countries buy more than one-third of U.S. merchandise exports.
- The United States ran a cumulative trade *surplus* in manufactured goods with Canada and Mexico of more than \$79 billion over the past seven years (2008-2014). For services, the U.S. *surplus* was \$41.8 billion in 2014 alone.
- NAFTA has been a boon to the competitiveness of U.S. manufacturers, which added more than 800,000 jobs in the four years after NAFTA entered into force. Canadians and Mexicans purchased \$487 billion of U.S. manufactured goods in 2014, generating nearly \$40,000 in export revenue for every American factory worker.
- NAFTA has been a bonanza for U.S. farmers and ranchers, helping U.S. agricultural exports to Canada and Mexico to increase by 350%.
- With new market access and clearer rules afforded by NAFTA, U.S. services exports to Canada and Mexico have tripled, rising from \$27 billion in 1993 to \$92 billion in 2014.
- Canada and Mexico are the top two export destinations for U.S. small and medium-size enterprises, more than 125,000 of which sold their goods and services in Canada and Mexico in 2014.

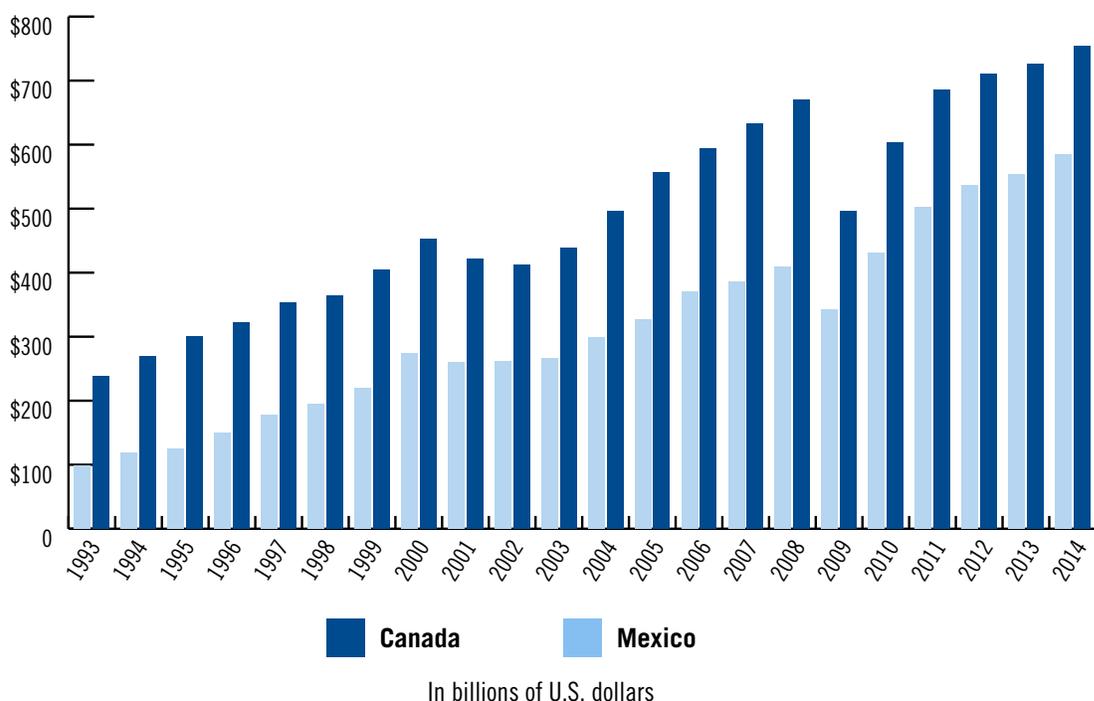

THE FACTS ON NAFTA

Signed on December 17, 1992, the North American Free Trade Agreement (NAFTA) entered into force on January 1, 1994. Many of its provisions were implemented immediately or within a few years, but a final handful of trade barriers were lifted on January 1, 2008. As a result, North America has become a virtually tariff-free trade zone, and a host of nontariff barriers to international commerce have been eliminated as well.

An estimated 14 million American jobs depend on the \$3.5 billion in trade that moves across our borders with Canada and Mexico every day. Much of this trade depends directly on NAFTA, which has in turn enhanced the global competitiveness of North American industry in a rapidly changing global economy.

Amid a great deal of misinformation, understanding NAFTA is more important than ever. While the agreement's impact has at times been exaggerated, it has proven to be one of the most important and beneficial trade agreements in U.S. history. The U.S. Chamber of Commerce urges elected officials and business leaders in Canada, Mexico, and the United States to build on this foundation in the years ahead and consider steps to modernize the terms of trade between our economies to spur economic growth and job creation here at home.

U.S. Trade with Canada and Mexico since NAFTA's Entry into Force

SUCCESS STORIES

Marlin Steel Wire Products LLC

NAFTA brings new sales and ease of business.

Location: Baltimore, Maryland • **Website:** www.marlinwire.com

*Drew Greenblatt, President,
Marlin Steel Wire Products*

Marlin Steel Wire Products is a leading manufacturer of custom wire baskets, wire forms, and precision sheet metal fabrication assemblies. The company caters to clients from the pharmaceutical, medical, industrial, aerospace, telecommunications and automotive industries all around the world. With a full-time team of engineers and industry-leading technology, Marlin Steel is able to produce a world-class product.

Marlin Steel has been exporting for 12 years, with sales now going to more than 39 countries. One-fourth of the company's 29 employees are employed as a direct result of the company's export business.

Canada and Mexico are vital markets for Marlin Steel. Each year, 15 percent of its sales go to those markets. Looking at its revenues in a different way, Marlin Steel's employees enjoy four paychecks a year thanks to sales in Canada and Mexico.

Drew Greenblatt, President of Marlin Steel Wire Products, emphasizes the importance of international trade and the impact it can have on small business. "NAFTA is a good thing for our country. It added new markets that we want, and now it's a piece of cake to do business with Canada and Mexico."

Mr. Greenblatt says the United States should continue to pursue more trade agreements vigorously: "From a business perspective, the foremost goal of U.S. trade policy should be to tear down barriers so companies like mine can start exporting to new markets. Free trade agreements have helped us accomplish this in the past, and will help our business grow in the future."

THE FACTS ON NAFTA

The Rationale

In assessing NAFTA, it's worthwhile reflecting on the basic premise under which it was negotiated.

While the United States receives substantial benefits from trade, the international playing field is sometimes unfairly tilted against American workers. The U.S. market is largely open to imports from around the world, but many other countries continue to levy steep tariffs on U.S. exports, and foreign governments have erected other kinds of barriers against U.S. goods and services. To different degrees and varying by sector, this was the case with Canada before the Canada-U.S. Free Trade Agreement of 1989 and with Mexico before NAFTA.

Americans rightly sense that this status quo is unfair to U.S. workers, farmers, and businesses. In fact, “the United States continues to be penalized by poor access to foreign markets, with the seventh highest average faced tariff in the world,” according to a recent report from the World Economic Forum.¹ The tariffs faced by U.S. exporters often soar into the double digits in many emerging markets, particularly for key U.S. manufactured goods and agricultural exports. These barriers are particularly burdensome for America's small and medium-size companies.

The U.S. Chamber believes that American workers, farmers, and companies must be allowed to operate on a level playing field when it comes to trade. Trade agreements should treat American manufacturers, service providers, farmers, and ranchers the same as their foreign competitors.

This was the principal rationale for NAFTA—to generate economic growth, new exports, and good jobs and do so in a way that is fundamentally fair. On this score, the agreement has been a dramatic success for American workers, farmers, ranchers, and companies—as it has for Canadians and Mexicans. Its commercial gains are the proof in the pudding.

Trade

The remarkable results of NAFTA are most obvious in the nearly fourfold rise in U.S. commerce with Canada and Mexico since the agreement entered into force. U.S. trade in goods and services with Canada and Mexico rose from \$337 billion in 1993 to \$1.338 trillion in 2014. Each day, the United States conducts more than \$3.6 billion in trade with its North American neighbors.²

Canada and Mexico are the two largest markets in the world for U.S. exports, purchasing more than one-third of U.S. merchandise exports (\$553 billion in 2014 or 34% of total goods exports). U.S. exports of goods and services to Canada and Mexico have more than tripled since NAFTA entered into force, from \$169 billion in 1993 to \$645 billion in 2014. U.S. imports from Canada and Mexico have also risen substantially under NAFTA, reaching \$692 billion in 2014.

The trade boom continues. U.S. merchandise exports to Canada and Mexico rose by 66% over the past five years. In fact, our North American neighbors provided 39% of all growth in U.S. merchandise exports in the 2009-2014 period. In dollar terms, U.S. merchandise exports to Canada and Mexico rose by \$219 billion over the past five years, an increase 2.7 times larger than the dollar increase in U.S. merchandise exports to the four BRIC economies (Brazil, Russia, India, and China).

In 2014, Canada (population 36 million) again edged the European Union (population 500 million) as the top market for U.S. goods exports. U.S. merchandise exports to Mexico (population 125 million) were nearly double those to China (population 1.4 billion), which is the third largest national market for U.S. exports.

Imports from Canada and Mexico provide direct benefits to Americans as well. They mean lower prices for American families as they try to stretch their budgets—and for companies seeking raw materials and other inputs. In recent decades, lower U.S. tariffs have stimulated American productivity through greater competition in the

Each day, the United States conducts more than \$3.6 billion in trade with its North American neighbors.

U.S. Trade with Canada and Mexico Under NAFTA

U.S. EXPORTS	1993	2000	2014	% Change 1993-2014

THE FACTS ON NAFTA

SUCCESS STORIES

Patton Electronics Co.

Sales double to Canada and Mexico due to NAFTA

Location: Gaithersburg, Maryland • **Website:** www.patton.com

Bobby Patton, President and CEO, Patton Electronics Co.

Bobby and Burt Patton founded Patton Electronics in 1984 while they were still students in college. Since then, the brothers have expanded their manufacturing company dramatically, and today it employs 170 people in Gaithersburg, Maryland. Patton Electronics makes a wide range of data and telecommunications products.

Patton Electronics started exporting in the 1990s and now sells to over 120 countries, and Canada and Mexico were among the firm's first export markets in the early 1990s.

Bobby Patton, President and CEO, said: "Before NAFTA, we had virtually no sales to Mexico and Canada. Between 1992 and 1994, our revenue on exports to Canada and Mexico doubled, from around \$100,000 per year to over \$250,000 per year. He added that "Patton Electronics' sales to Canada and Mexico averaged more than \$1 million per year from the 2000 to 2011" and that "NAFTA continues to be a powerful engine for growth and job creation for the company."

Peter Bowe, President, Ellicott Dredges

Ellicott Dredges, LLC

Fought for NAFTA more than 20 years ago, benefiting today

Location: Baltimore, Maryland • **Website:** www.dredge.com

Ellicott Dredges, LLC was at the forefront of the national debate on NAFTA more than 20 years ago. As the world's leading manufacturer and exporter of dredges, Ellicott Dredges President Peter Bowe, Ellicott Dredges Union President Robert Gardner, and the union itself endorsed NAFTA.

Because Ellicott depends on exports, Mr. Bowe said that every employee understood how NAFTA would be beneficial for Ellicott and create jobs. In the months leading up to the vote on NAFTA, Ellicott employees voiced strong support for the agreement.

Peter Bowe penned an October 27, 1993, op-ed stating: "When the Canadians eliminated their duties against American imports [under the earlier Canada-U.S. Free Trade Agreement], new Ellicott dredges were much more attractive to Canadian buyers than European products or used equipment, which was less efficient but also much less expensive. The effect on exports was immediate: Our Canadian sales more than doubled. We expect the same from Mexico if NAFTA passes."

As predicted, Ellicott saw quick dividends. A month after NAFTA was signed into law, a Mexico road construction company bought two dredges from Ellicott. Ellicott does more business in Canada and Mexico today than the company did in total over 20 years ago. Peter Bowe understands the value of American manufacturing and the power behind American exports. He was pleased to report in early 2017, Ellicott expects to complete a major business deal with Canada, which he expects to bring great profits for the company and will continue to make America a magnet for jobs thanks to NAFTA.

marketplace and brought greater product choices to U.S. producers and consumers. According to the Peterson Institute for International Economics, this has brought “a gain in annual income of about \$10,000 per household.”³

Above all, two decades of economic integration under NAFTA have made it less and less relevant to look at North American trade through a mercantilist lens. As officials and business leaders in Canada, Mexico, and the United States have pointed out with growing frequency, North Americans increasingly “make things together,” employing “global value chains” that cross national borders.

This approach leads to efficiencies that have proven vital to the global competitiveness of North American industry. In the highly integrated auto sector, for example, it is common for cars assembled in the Great Lakes region to cross the U.S.-Canada border half a dozen times as they are assembled. In turn, American exports of motor vehicles increased 89% between 2009 and 2014, topping 2 million cars and trucks for the first time in 2014. A growing share is headed to Asia, the Middle East, and other locations: U.S.-built cars shipped to China have risen sevenfold since 2009.

One study found that “one-quarter of U.S. imports from Canada consist of value added from the United States itself, and a huge 40% of U.S. final good imports from Mexico consist of its own [U.S.] value added.”⁴ As former Mexican Ambassador to the United States Arturo Sarukhan has pointed out, “For every dollar that Mexico earns from exports, 50 cents are spent on American goods.”⁵

Nonetheless, foes of NAFTA for years have emphasized the U.S. trade balance in their criticisms. Of note, the labor union-funded Economic Policy Institute (EPI) has issued regular reports leading with the contention that NAFTA produced trade deficits that, in turn, destroyed U.S. jobs. For example, the latest of these reports contends that 682,900 U.S. jobs have been “lost or displaced” due to bilateral trade deficits the authors attribute to NAFTA.⁶ EPI has attracted local media coverage by providing state-by-state breakdowns of these supposed job losses.

There are a number of problems with this line of argument, but one is a simple matter of fact: In its trade with Canada and Mexico, the United States in 2014 registered a \$23.3 billion trade *surplus* in manufactured goods⁷ and a \$41.8 billion trade surplus in services.⁸

The United States did register a \$41 billion combined trade deficit with Canada and Mexico in 2014, but the U.S. status as a net energy importer is the driver. While the shale revolution has reduced the U.S. trade deficit in oil and gas as domestic production has increased, the United States still recorded a trade deficit in these products with Canada and Mexico of \$104 billion in 2014. If current energy trends continue, this deficit may decline. In any event, it is irrelevant to a sober assessment of NAFTA.

Few Americans are aware that the United States in 2014 registered trade surpluses with its NAFTA partners in manufactured goods (\$23 billion) and services (\$41 billion).

THE FACTS ON NAFTA

Myths and Facts about NAFTA

Myth: NAFTA sent U.S. factory jobs abroad with a “giant sucking sound.”

Fact: It never happened. U.S. manufacturers added more than 800,000 jobs in the four years after NAFTA entered into force, according to the Bureau of Labor Statistics. This boom in factory jobs came after a period before NAFTA entered into force (1980–1993) when the United States lost nearly 2 million manufacturing jobs. Canada and Mexico are the top two destinations for U.S. manufactured goods exports, which all told support more than half of America’s 12.3 million factory jobs.

Myth: NAFTA added to the U.S. trade deficit.

Fact: With regard to Canada and Mexico, the United States ran a cumulative trade surplus in manufactured goods of more than \$79 billion over the past seven years (2008–2014). For services, the U.S. surplus was \$41.8 billion in 2014 alone. The fact that substantial U.S. petroleum imports from Canada and Mexico contribute to the overall U.S. trade deficit stems from geology—not NAFTA.

Myth: NAFTA has contributed to unemployment.

Fact: The U.S. unemployment rate was markedly lower in the years immediately after NAFTA came into force (it averaged 5.1% in 1994–2007) than in the period immediately before (it averaged 7.1% in 1982–1993). Trade with Canada and Mexico supports nearly 14 million U.S. jobs, and nearly 5 million of these jobs are supported by the increase in trade generated by NAFTA, according to a comprehensive economic study commissioned by the U.S. Chamber.

Jobs

To provide a more serious economic analysis of the relationship between trade agreements and job creation, the U.S. Chamber of Commerce commissioned a study in 2010 entitled *Opening Markets, Creating Jobs: Estimated U.S. Employment Effects of Trade with FTA Partners*.⁹ The study examined U.S. free trade agreements (FTAs) implemented with a total of 14 countries, including Canada and Mexico.

The study employed the gold standard economic model used by economists worldwide: a computable general equilibrium model known as the Global Trade Analysis Project (GTAP). This model, developed in the early 1990s, is now maintained—and constantly enhanced—by a consortium of more than 30 U.S. and international organizations, including the U.S. International Trade Commission, the World Trade Organization, the World Bank, and half a dozen U.S. government agencies. The study was prepared by Dr. Joseph François, an individual member of the GTAP consortium, and Laura M. Baughman, President of The Trade Partnership.

The results of this comprehensive study are impressive: Trade with Canada and Mexico supports a net total of nearly 14 million U.S. jobs. Recent research papers published by the Embassy of Canada in Washington¹⁰ and the Woodrow Wilson International Center for Scholars¹¹ arrived at very similar total numbers of jobs. Of these 14 million American jobs, the Chamber study found that nearly 5 million are supported by the increase in trade generated by NAFTA. It would be difficult to name another budget neutral policy initiative undertaken by the U.S. government that has generated jobs on a scale comparable to NAFTA.

These benefits extend to every U.S. state. Forty-three U.S. states exported at least \$1 billion in goods to Mexico and Canada last year. The Chamber study shows that NAFTA generated an increase in these exports as well as imports that supports an additional 575,000 and 387,000 jobs in California and Texas, respectively. (See table for details.)

NAFTA critics claiming that the agreement has led to the net loss of U.S. jobs would do well to review the historical record. In its aforementioned study, EPI contends that 61% of the 415,000 U.S. jobs “lost or displaced” due to trade with Mexico were in manufacturing industries. However, Bureau of Labor Statistics data show that U.S. manufacturers added more than 800,000 jobs in the four years after NAFTA entered into force. This boom in factory jobs came after a period before NAFTA entered into force (1980–1993) when the United States lost nearly 2 million manufacturing jobs.

For context, total U.S. private sector employment has risen from 91.8 million in December 1993 to 122.6 million in September 2016, according to the Bureau of Labor Statistics. This represents an increase of more than 30.9 million jobs, or a 33% expansion in the number of Americans working.

In addition, the U.S. unemployment rate was markedly lower in the years immediately after NAFTA came into force, according to data from the Bureau of Labor Statistics. In the period 1994–2007, the U.S. unemployment rate averaged 5.1%. This compares with an average rate of 7.1% during a period of similar length just before NAFTA entered into force (1982–1993). While the 2007–2009 recession caused unemployment to rise sharply, it had nothing to do with NAFTA.

Did NAFTA lead to the creation of tens of millions of American jobs and reduce U.S. unemployment rates by several percentage points? No. However, NAFTA clearly did not generate the wave of job losses attributed to it by organized labor.

Finally, most economists believe that NAFTA’s most significant effect on jobs—particularly

Trade with Canada and Mexico supports nearly 14 million U.S. jobs, and nearly 5 million of these net jobs are supported by the increase in trade generated by NAFTA.

THE FACTS ON NAFTA

in a period of low unemployment such as the United States enjoyed in the years immediately after NAFTA entered into force—was to gradually alter the mix of jobs by creating more high-skill, high-wage jobs and fewer low-skill, low-wage jobs. According to Commerce Department research, jobs tied to exports pay wages that are typically 18% higher than those that are not, so the shift in the mix of U.S. jobs toward more export-oriented industries represents a net gain for working Americans.¹²

Manufacturing

U.S. manufacturers have been among the principal beneficiaries of NAFTA. Again, the broad historical context is important to this assessment.

Data from the Federal Reserve Bank of St. Louis show that U.S. real manufacturing output rose by more than 70% over the past 25 years.¹³ This represents the continuation of a long trend: U.S. manufacturing value-added has grown eightfold since 1947 in real terms. The U.S. share of world manufacturing output, on a value-added basis, has remained fairly steady for about four decades.

American manufacturers were hammered by the painful 2007–2009 recession and a steep fall in demand. But throughout the preceding two decades, U.S. manufacturers set new records for output, revenues, profits, profit rates, and return on investment.

The same can't be said of factory jobs. According to the Bureau of Labor Statistics, U.S. manufacturers employed 16.8 million workers when NAFTA entered into force in January 1994, a figure that then rose over the next four years to top 17.6 million in 1998. Sharp job losses in U.S. manufacturing in the recessions of 2001–2002 and 2007–2009 brought the number of Americans employed in manufacturing to a new low of 11.4 million in early 2010. A largely export-driven recovery had boosted manufacturing employment to 12.3 million by mid-2016.

Where have the lost manufacturing jobs gone? According to research by economists with Ball State University, “almost 88 percent of job losses in manufacturing in recent years can be attributable to productivity growth.”¹⁴ Technological change, robotics, automation, and widespread use of information technologies have enabled firms to boost output even as some have cut payrolls. Research suggests that technological advances are making sophisticated capital goods substitutes for low-skilled workers.

This productivity revolution is a complex phenomenon. NAFTA critics are correct when they say that manufacturing employment hit a peak and then began a steady decline. However, the peak was in 1979, 15 years before NAFTA came into force. This phenomenon is also worldwide: A RAND study found that China shed 25 million manufacturing jobs between 1994 and 2004, 10 times more than the United States lost in the same period.¹⁵

Today, as American manufacturers struggle with a weak recovery, exports to Canada and Mexico are more important than ever. Canadians and Mexicans purchased \$487 billion of U.S. manufactured goods in 2014—a sum representing 34.7% of all the exports produced by the 12.3 million Americans employed in manufacturing.

In other words, the NAFTA market generates export revenue of nearly \$40,000 for each American factory worker. Compare this with the annual pay and benefits of the typical U.S. manufacturing worker—\$77,500. How could manufacturers make their payrolls without the revenues they earn by exporting to Canada and Mexico? The short answer is, they couldn't.¹⁶

Finally, it's no surprise that Canada and Mexico are the top two export destinations for U.S. small and medium-size enterprises (SMEs) that export (most of which are manufacturers). More than 125,000 U.S. SMEs exported to Canada and Mexico in 2014, and they represented more than 95% of U.S. exporters to the NAFTA market. Their 2014 exports topped \$136 billion, representing more than one-quarter of all SME exports worldwide.¹⁷

Agriculture

For American farmers and ranchers, NAFTA has been a bonanza. U.S. agricultural exports to Canada and Mexico topped \$41 billion in 2014, a 350% increase from just \$9 billion in 1993.

U.S. agricultural exports to Canada expanded at a compound annual rate of 7.9% between 1988 (the last year prior to implementation of the Canada-U.S. Free Trade Agreement) and 2012. Canada was the largest agricultural export market of the United States prior to 2013, when it was overtaken by China, but Canada resumed the top spot in 2015. This is remarkable given that China's population is nearly 40 times that of Canada.

U.S. farms and ranches supply 59% of Canadian agricultural imports. Grains, fruit, vegetables, meat, and related products make up about 60% of U.S. agricultural exports to Canada.¹⁸ As in manufacturing, however, Canadian and U.S. farmers and ranchers work in an integrated and interdependent marketplace. According to the U.S. Department of Agriculture (USDA), "U.S.-Canada agricultural trade is marked by a substantial amount of intra-industry trade, particularly in value-added products."¹⁹ This includes co-production of processed foods such as pet foods, bakery products, breakfast cereal, and pastas. There is significant intra-industry trade in wheat products and beef, for example.

NAFTA did even more to open the Mexican market for U.S. farmers and ranchers. As a USDA report emphasized, "Mexico does not produce enough grains and oilseeds to meet internal demand, so the country's food and livestock producers import sizable volumes of these commodities to make value-added products, primarily for the domestic market. In turn, U.S. fruit and vegetable imports from Mexico are closely tied to Mexico's expertise in producing a wide range of produce, along with its favorable climate and a growing season that largely complements the U.S. growing season."²⁰ U.S. agricultural exports to Mexico expanded at a compound annual rate of 9.1% between 1993 and 2012.

Prior to NAFTA, Mexico's tariffs were highest for agricultural products. NAFTA allowed

Canada and Mexico are the top two export destinations for U.S. small and medium-size enterprises, more than 126,000 of which exported their goods within the NAFTA market.

THE FACTS ON NAFTA

American farmers and ranchers to get past those barriers.

As a result, U.S. agricultural exports to Mexico have quintupled since NAFTA entered into force, and the United States today supplies three-quarters of Mexico's agri-food imports. According to the USDA, grains, oilseeds, meat, and related products make up about three-quarters of U.S. agricultural exports to Mexico.²¹

Services

NAFTA has brought significant benefits to U.S. services industries, which generate more than 80% of U.S. economic output and private sector employment. The United States is by far the world's largest exporter of services, which surpassed \$710 billion in 2014. It is home to large numbers of successful services firms in such sectors as audiovisual, banking, energy services, express delivery, information technology, insurance, and telecommunications.

Thanks to new market access and clearer rules afforded by NAFTA, U.S. services exports to Canada and Mexico have tripled, rising from \$27 billion in 1993 to \$92 billion in 2014. Services imports from Canada and Mexico also expanded, growing from \$17 billion to \$50 billion.

NAFTA eliminated trade barriers in most services sectors in Canada and especially Mexico, many of which were closed to U.S. participation prior to NAFTA. NAFTA has also ushered in greater transparency in the regulations that set the rules of the road for services markets.

The Future

What's next for this extraordinary partnership and the 14 million Americans whose jobs it supports? For the U.S. business community, North America is much more than a geographical descriptor. Canada, Mexico, and the United States together represent an expanded North American home market for U.S. workers, farmers, and companies. Without this broader, integrated market, U.S. enterprises would be significantly less competitive on the global stage.

Behind North America's impressive trade statistics lies an integrated web of cross-border supply chains that enhances the competitiveness of all three countries in global markets and gives each country a fundamental stake in one another's success. This interdependence is reflected in the high percentage of U.S. content found in Canada's and Mexico's exports to the United States and the world.

However, this successful economic model faces new challenges. The U.S. borders with Canada and Mexico "thickened" considerably as new security measures have been implemented in recent years. While many of these security enhancements were necessary, it is important to find ways to continue to facilitate trade for the sake of the millions of American jobs at stake.

Recent joint initiatives with Canada and Mexico are a step in the right direction. These include the U.S.-Canada Regulatory Cooperation Council, the U.S.-Mexico High Level Economic Dialogue (HLED), the 21st Century Border Action Plan with Mexico, and the Beyond the Borders Action Plan with Canada. They represent the type of collaboration that is needed to maximize North American competitiveness in global markets.

Business efforts complement these government-to-government initiatives. For example, the U.S. Chamber, together with leading Mexican trade association Consejo Coordinador Empresarial (CCE), oversees the U.S.-Mexico CEO Dialogue, an initiative designed to provide sector recommendations to advance North American competitiveness. Specifically, Dialogue chief executives are focused on four key sectors: energy, infrastructure, workforce development, and mobility of high-skilled workers.

The synergies across the North American economies in all four of these areas are too powerful to ignore. Recent developments across our continent in the energy space—that have allowed us to tap previously inaccessible sources of energy such as shale and renewables—require a commensurate investment in regional infrastructure to reach local and global consumers. Simultaneously, historic growth-oriented reforms in the energy sector and elsewhere in Mexico necessitate enhanced efforts to develop human capital and facilitate movement of skilled workers across continental borders. Given the success of the U.S.-Mexico CEO Dialogue in advancing these and other priorities in the bilateral context—in close collaboration with the government-to-government HLED—the U.S. private sector is exploring the launch of a complementary U.S.-Canada private sector-led initiative.

Exports to Canada and Mexico generate nearly \$40,000 in annual export revenue for every American factory worker.

Conclusion

Because an estimated 14 million American jobs depend on trade with Canada and Mexico, NAFTA remains critical to U.S. workers, farmers, ranchers, and companies. Members of the U.S. Chamber of Commerce have seen its benefits firsthand as it has generated new opportunities for millions of Americans—as it has for Canadians and Mexicans. As the United States considers the path forward for the North American economic partnership, NAFTA should continue to play the foundational role it has for the past two decades.

2. Unless otherwise noted, all trade statistics are from the U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division, except for agricultural trade statistics, which are from the U.S. Department of Agriculture. Like U.S. federal agencies and most other private sector analysts, for goods trade this report refers to total U.S. exports and general imports. More narrowly-focused trade data—exports of domestic merchandise, further excluding U.S. goods returned, and imports for consumption, also excluding U.S. goods returned—show the same trends as those referred to in this report. Indeed, one of the main aims of this report is to show the co-production that has emerged among Canada, Mexico, and the United States and how it has enhanced the global competitiveness of North American industry and agriculture.
